Abstract

© Medwell Journals, 2017. The study considers the modern approaches to the analysis and evaluation of financial stability of Russian companies to study the effectiveness of cash flow management. A comparative analysis of the financial stability of organizations of the Russian Federation and the Republic of Bashkortostan is conducted by using a system of indicators based on the coefficient method. Identified trends show a decrease in the deficit of financial stability and its own funds which hinders the development of investment activity and the expansion of the productive capacity of Russian companies.
